

ABSTRACT

A spherical ornament having first and second message fields, wherein the first message field has a dark field with at least one star superimposed thereon and a striped field proximate to the dark field, and the second field contains a second message. In a preferred embodiment, the dark field is a blue equilateral triangle with a plurality of white stars, and is contacted on at least two sides by a field of red stripes on a white background. In a preferred embodiment, the ornament is an antenna ball, dangler, or pen and pencil topper, having a diameter between about 1 and about 2 inches. The second message field can be used to advertise a business entity or cause, or send another desired message. A unique spring mount, advertising method, and advertising devices are also disclosed.
